

False
Correct

6. In batch normalization as presented in the videos, if you apply it on the lth layer of your neural network, what are you normalizing?

point		u
		Correct
		$W^{[i]}$
		○ P _[i]
~	7.	In the normalization formula $z_{norm}^{(i)}=\frac{z^{(i)}-\mu}{\sqrt{\sigma^2+z}},$ why do we use epsilon?
1/1 point		In case μ is too small To avoid division by zero
		Correct
		To speed up convergence To have a more accurate normalization
~	8.	Which of the following statements about γ and β in Batch Norm are true? $\beta \text{ and } \gamma \text{ are hyperparameters of the algorithm, which we tune via random}$
1/1 point		sampling. Un-selected is correct
		on-selected is correct
		There is one global value of $\gamma\in\Re$ and one global value of $\beta\in\Re$ for each layer, and applies to all the hidden units in that layer.
		Un-selected is correct
		$ \begin{tabular}{ll} \hline & \\ & \\$
		Correct
		The optimal values are $\gamma=\sqrt{\sigma^2+arepsilon}$, and $\beta=\mu$.
		Un-selected is correct
		They can be learned using Adam, Gradient descent with momentum, or RMSprop, not just with gradient descent.
		Correct
•	9.	After training a neural network with Batch Norm, at test time, to evaluate the neural network on a new example you should:
1/1 point		
		Correct
		If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one test example, duplicate that example 256 times so that you're working with a mini-batch the same size as during training.
		Use the most recent mini-batch's value of μ and σ^2 to perform the needed normalizations.
		Skip the step where you normalize using μ and σ^2 since a single test example cannot be normalized.
~	10.	Which of these statements about deep learning programming frameworks are true? (Check all that apply)
1/1 point		Deep learning programming frameworks require cloud-based machines to run.
		Un-selected is correct
		A programming framework allows you to code up deep learning algorithms with typically fewer lines of code than a lower-level language such as Python.
		Correct

Even if a project is currently open source, good governance of the project helps

ensure that the it remains open even in the long term, rather than become closed or modified to benefit only one company.
